

“After ordering online product”

I think technology has now become such an important part without which we cannot imagine our life. Technology has impacted in almost every field including healthcare, business, communication, transportation and so on. The development of technology has helped to save many peoples life, to make work easier and efficient and as a whole helped to make this world a better place to live in. Being specific to myself, technology has played a vital role in my education, banking, and shopping. Being a computer science student, it is very important to stay updated with the latest technology. If I closely analyze my daily activity then most of the time I am with my laptop or phone doing assignments, research for the project, updated in social media and doing online shopping's. I think online shopping is the coolest thing that technology could serve. Many people prefer online shopping than conventional shopping because it saves time and money. In online shopping, we can shop at any suitable time 24/7 without any interruption. It also prevents us from staying hours in line for payments. Researching products and comparing their prices is much easier online. The meme I created is about online shopping. It shows that making an online order is so easier and safer that even a baby can do it. There is also a text “Will it fit my size?” which shows that while making online shopping customers should be aware of the product because they cannot see the product until they have it.
